INT-CL (IPC): A61B 17/36; A61F 9/013

ABSTRACTED-PUB-NO: DE 4405848A

BASIC-ABSTRACT:

The instrument has a hollow tube (3) which tapers down to one end and has a drive piece (2). A spacer piece near the tapered part restricts the penetration path of the hollow tube into the corneal skin to a maximum depth of 0.6 millimetres. The spacer piece is in the form of a static cladding tube (4).

The space between the corneal skin and the spacer piece can be altered by a fine adjustment, especially micrometer screw. The diameter of the circular hollow tube's point at the end operating upon the corneal skin amounts to 10 to 700, preferably 160 micrometers. The drive piece is in the form of a rapid rotating turbine detachably joined to the hollow tube.

USE/ADVANTAGE - The economically produced instrument is for treating defective sight caused by refraction.

TITLE: Layer-by-layer plastic surgery of cornea - performing incision of surface layers of cornea at prescribed depth and diameter of transplant exceeds that of operational base

INVENTOR: GIMRANOV, R M

PATENT-ASSIGNEE: UFA EYE DISEASE RES INST [UFEYR]

PRIORITY-DATA: 1994RU-0044741 (December 19, 1994)

INT-CL_(IPC): A61F009/013

ABSTRACTED-PUB-NO: RU 2102050C

BASIC-ABSTRACT: The method involves incision of an affected area of a cornea with its subsequent inter-lamellar separation and implantation of a transplant.

The incision of a surface layers of the cornea is performed at a depth of 0.1-0.15mm of its thickness and the diameter of the transplant exceeds the diameter of an operational base by 1.5-1.9mm.

Collection of a transplant from a donor eye is performed by a trepan. The transplant is then put onto the operational base. Protruding edges of the transplant are inserted into

inter-lamellar cavity. During use of layer-like transplant up to 5.0mm it is

possible to make less than 4 knot-type stitches. With the diameter of the transplant larger than 5.0mm 3 or 4 knot stitches shall be applied.

USE - For performing plastic surgery of cornea.

ADVANTAGE - Reduced trauma, improved functional performance and reduced treatment interval.
